

ASSIGNMENT - 4

DATE	28 October 2022
TEAM ID	PNT2022TMID10141
Maximum mark	2 marks

QUESTION :

Write code and connections in wokwi for ultrasonic sensor.

Whenever distance is less than 100 cms send "alert" to ibm cloud and display in device recent events.

Upload document with wokwi share link and images of ibm cloud

WOKWI CODE AND IMPLEMENTATION LINK:

147     }
148 }
149
150 void callback(char* subscribetopic, byte* payload, unsigned int payloadLength)
151 {
152     Serial.print("callback invoked for topic: ");
153     Serial.println(subscribetopic);
154     for (int i = 0; i < payloadLength; i++) {
155         //Serial.print((char)payload[i]);
156         // data3 += (char)payload[i];
157     }
158
159     // Serial.println("data: " + data3);
160     //if(data3=="lighton")
161     {
162         //Serial.println(data3);
163         digitalWrite(LED,HIGH);
164
165     }
166
167     //else
168     {
169         //Serial.println(data3);
170         digitalWrite(LED,LOW);
171     }
172 }
```

OUTPUT:

When the distance is less than 100 cms, send an “alert” message to IBM Watson IoT Platform.

The screenshot displays the Wokwi IDE interface. On the left, the Arduino sketch is shown with the following code:

```
1 #include <WiFi.h> //library for wifi
2 #include <PubSubClient.h> //library for Mqtt
3
4 void callback(char *topic, byte *payload, unsigned int payloadLength);
5
6 //-----credentials of IBM Accounts -----
7
8 #define ORG "te1vcf" //IBM ORGANIZATION ID
9 #define DEVICE_TYPE "weather_device" //Device type mentioned in ibm watson IOT Platform
10 #define DEVICE_ID "weather_today" //Device ID mentioned in ibm watson IOT Platform
11 #define TOKEN "oI@W6UYk1fCQvAq39" //Token
12
13
14
15 float dist;
16
17 char server[] = ORG ".messaging.internetofthings.ibmcloud.com"; // Server Name
18 char publishTopic[] = "iot-2/evt/Data1/fmt/json"; // topic name and type of event perform
19 char subscribtopic[] = "iot-2/cmd/test/fmt/string"; // cmd REPRESENT command type AND CO
20 char authMethod[] = "use-token-auth"; // authentication method
21 char token[] = TOKEN;
22 char clientId[] = "d:" ORG ":" DEVICE_TYPE ":" DEVICE_ID; //client id
23
24 WiFiClient wificlient; // creating the instance for wificlient
25
26 PubSubClient client(server,1883, callback,wificlient); //calling the predefined client
27
28 int LED = 4;
29
30 int trig =5;
31
32 int echo= 18;
33
34 void setup()
35 {
```

On the right, the simulation window shows an ESP32 microcontroller connected to an ultrasonic sensor. The sensor's distance is displayed as 42cm. Below the simulation, the console output shows the following messages:

```
object is near
Sending payload: {"distance":42.34,"object":"ALERT! object is near"}
Publish ok
Distance in cm : 42.33
object is near
Sending payload: {"distance":42.33,"object":"ALERT! object is near"}
Publish ok
```

Below the IDE, a screenshot of the IBM Watson IoT Platform dashboard is shown. The dashboard displays a table with the following data:

Identity	Device Information	Recent Events	State	Logs
weather_today	Connected	weather_device	Device	Oct 7, 2022 11:22 AM

The recent events listed show the live stream of data that is coming and going from this device.

Event	Value	Format	Last Received
Data1	{"distance":42.34,"object":"ALERT! object is near"}	json	a few seconds ago
Data1	{"distance":42.34,"object":"ALERT! object is near"}	json	a few seconds ago
Data1	{"distance":42.33,"object":"ALERT! object is near"}	json	a few seconds ago
Data1	{"distance":42.33,"object":"ALERT! object is near"}	json	a few seconds ago
Data1	{"distance":42.34,"object":"ALERT! object is near"}	json	a few seconds ago

When the object is far(greater than 100 cms) , send “ no object found” to the IBM Watson IOT Platform.
